Microsoft Sentinel

Modernize security operations and focus on what matters most with a cloud-native SIEM, enriched by AI.

Microsoft Sentinel is a modern, cloud-native SIEM powered by AI, automation, and Microsoft's deep understanding of the threat landscape empowering defenders to detect, investigate and respond to threats - quickly and efficiently. With in-built security orchestration, automation, and response (SOAR) capabilities, user and entity behavior analytics (UEBA) and threat intelligence (TI), customers get a comprehensive solution that is both easy and powerful. Microsoft Sentinel aggregates security data from all sources, including users, applications, servers, and devices running on-premise or in the cloud. By eliminating on-premises infrastructure, it lowers costs by 44% compared to legacy SIEMs, as found by the commissioned Forrester Consulting Total Economic Impact™ of Microsoft Sentinel study. With Microsoft Sentinel defenders can hunt and resolve critical threats quickly and efficiently.

1Password SIEM Integration with Microsoft Sentinel helps streamline security monitoring and investigation workflows for 1Password events.

1Password for Microsoft Sentinel is an end-to-end solution allowing you to ingest 1Password Events API data directly to Microsoft Sentinel. This brings visibility to 1Password audit events, sign-in activity, and shared item usage, with the full power of Microsoft Sentinel. You can get started right away with alerts and a dynamic, customizable dashboard thanks to out-of-the-box analytics rules and workbooks. The new integration makes it easier for security admins to monitor and manage their organization's credentialsand secrets, better assess security risks, and quickly detect, investigate, and mitigate threats.

Customer Benefits

- **Track security events:** Stay in the know with real-time alerts for successful and failed login attempts as well as account and billing changes.

- **Monitor shared item usage:** Gain insights into user adoption and usage, file uploads, and item modifications for accountability and transparency.

- **Streamline reporting:** Consolidate 1Password logs into Sentinel for a single pane of glass and reducing the time spent toggling between different apps and services.
