

Every request for access flows through one trusted place

1Password is the control point between the people, machines, and agents that need access

Agent identity scenarios by audience

1Password capabilities for security leaders, developers, and business users

CISO OR CTO

You found out unauthorized AI agents are accessing your data

How do you move from discovery to policy enforcement?

AI Discovery

Surfaces every AI tool in use, including OpenClaw.

Developer Watchtower

Scans endpoints for exposed credentials and secrets.

MCP Gateway

Issues agent specific tokens and enforces policy.

Agentic Autofill

Routes browser agent requests through biometric approval.

Agent Identity, Policy & Audit

Establishes identity and auditability for agents.

DEVELOPER OR DEVOPS

You're building with agents and can't afford a leak

How do you avoid secret exfiltration and keep a clean audit trail?

Credential Brokering

Secrets resolve securely at runtime with isolated keysets.

Workload Identity Federation

No static API keys. Use ephemeral credentials.

Agent Auth Protocol

Shared identity model for downstream services.

JIT Credentials

Credentials provision at task start and delete on completion.

MCP Gateway

Injects secrets at runtime without .env exposure.

PROFESSIONAL OR AI BUILDER

You're automating your job with agents and want to stay safe

How do you give agents limited access without triggering a security incident?

Agentic Autofill

Approve browser agent access through encrypted workflows.

Partner Integrations

Use Anthropic and Browserbase with 1Password.

Perplexity Comet Integration

Secure access mediation for Comet actions.

Agent Identity, Policy & Audit

Track which agent performed which action.
